Dayinta Agustina Zanuel, Ibrahim Frosly Alesandro, Fanya Az-Zahra Fakhressy, Dinda Tria Kusuma, Faiz Makiinun Amin, Ulfa Siti Nuraini:

We have reached a decision regarding your submission to Journal of Information Systems and Informatics, "Forecasting Indonesian Coal Stock Prices Using a Hybrid ARIMA-LSTM Model in a Web-Based Information System".

Our decision is to: **Revision Required**

Dear Author,

Please revise your manuscript in accordance with all comments and suggestions provided by Reviewer 1 and Reviewer 2. All requested revisions must be addressed thoroughly and carefully.

We kindly request that you submit the revised manuscript within **3 weeks**. Along with the revised manuscript, please also attach **a revision cover letter** clearly explaining each revision made (Click here to see sample), so that all changes can be properly tracked and evaluated. Please note that, after the revised manuscript is submitted, your article will proceed to **Round 2 of the review process** for further evaluation. If no revision is received by the specified deadline, we will assume that the author does not wish to continue the publication process.

If you have any questions regarding our articles, please contact us at journal-isi@adsii.or.id, not the editor's personal email.

Sincerely,
Editorial Team / Journal of Information Systems and Informatics

Reviewer 1:
Recommendation: Resubmit for Review

Does the title reflect the content, specific and effective?

Yes

Suggestions for improvements that must be corrected by the author in the title:

Further Suggestions:
1. Consider making the title more specific by highlighting the hybrid forecasting approach and selected Indonesian coal stocks.
2. Clarify whether the main contribution is the forecasting model or the dashboard implementation.
3. Avoid titles that imply general investment prediction capability.

Abstracts and keywords have described the overall content?

Yes

Suggestions for improvements that must be corrected by the author in abstracts and keywords:

Further Suggestions:
1. Clarify that long-term projections are exploratory scenarios rather than investment recommendations.
2. Mention the evaluation setting and comparison strategy more clearly.
3. Avoid claiming model superiority without baseline comparison.
4. Improve keywords by adding terms related to financial forecasting and decision-support systems.

Background issues, problem formulation and objectives research, when viewed from the clarity of the definition

Enough

Suggestions for improvements that must be corrected by the author in introduction:

Further Suggestions:
1. Strengthen the research gap by comparing this study with previous forecasting approaches.
2. Clearly explain the novelty of the proposed framework.
3. Reduce unrelated background discussion and focus more on financial forecasting challenges.
4. Add clear research objectives or research questions.

Research method used, when viewed from the formulation problem and purpose:

Poor

Suggestions for improvements that must be corrected by the author in methods:

Further Suggestions:
1. Provide more information about dataset preparation and model configuration.
2. Explain the ARIMA parameter-selection process more clearly.
3. Clarify how LSTM parameters were selected.
4. Report implementation details to improve reproducibility.
5. Explain why only historical closing prices were used without external market variables.

Clarity and comprehensiveness of methods / analysis and synthesis with the results of the discussion, have you answered the problem thoroughly?

No

Suggestions for improvements that must be corrected by the author in results and discussion:

Further Suggestions for Results:
1. Add comparison with individual ARIMA and LSTM models.
2. Provide additional validation to support the reliability of the results.
3. Include prediction results for all stocks, not only selected examples.
4. Explain the reasons behind different performances among companies.
Further Suggestions for Discussion:
1. Discuss the impact of market volatility and structural changes.
2. Explain limitations of using only historical prices.
3. Interpret long-term forecasting results carefully because uncertainty increases over time.
4. Discuss future improvements such as external financial indicators and adaptive models.

The conclusions in this paper:

Enough

Suggestions for improvements that must be corrected by the author in conclusion:

Further Suggestions:
1. Clarify that the findings are limited to the evaluated stocks and period.
2. Avoid implying that the forecasting system can directly support investment decisions.
3. Add limitations and future research directions.

Have references been written with citation tools?

No

Suggestions for improvements that must be corrected by the author in references:

Further Suggestions:
1. Add recent journal references on hybrid forecasting and financial time-series prediction.
2. Include original references for ARIMA and LSTM.
3. Improve consistency in reference formatting.

Reviewer 2:
Recommendation: Revisions Required

Does the title reflect the content, specific and effective?

Yes

Suggestions for improvements that must be corrected by the author in the title:

Further Suggestions:
1. Highlight the ARIMA-LSTM forecasting contribution.
2. Specify that the study focuses on Indonesian coal-sector stocks.

Abstracts and keywords have described the overall content?

Yes

Suggestions for improvements that must be corrected by the author in abstracts and keywords:

Further Suggestions:
1. Explain the evaluation procedure more clearly.
2. Clarify the meaning of long-term projections.
3. Avoid general claims about forecasting performance without sufficient comparison.

Background issues, problem formulation and objectives research, when viewed from the clarity of the definition

Good

Suggestions for improvements that must be corrected by the author in introduction:

Further Suggestions:
1. Provide stronger justification for selecting coal stocks.

2. Discuss previous forecasting limitations more clearly.
3. Explain the expected contribution of the proposed hybrid model.

Research method used, when viewed from the formulation problem and purpose:

Poor

Suggestions for improvements that must be corrected by the author in methods:

Further Suggestions:
1. Explain data preprocessing and model training procedures more clearly.
2. Add baseline models for comparison.
3. Report important implementation details and parameter settings.
4. Include validation strategies beyond a single testing period.

Clarity and comprehensiveness of methods / analysis and synthesis with the results of the discussion, have you answered the problem thoroughly?

No

Suggestions for improvements that must be corrected by the author in results and discussion:

Further Suggestions for Results:
1. Add more detailed performance comparison.
2. Include additional forecasting metrics.
3. Provide uncertainty analysis.
4. Report computational complexity if efficiency is discussed.
Further Suggestions for Discussion:
1. Explain differences in stock behavior and volatility.
2. Discuss possible causes of forecasting errors.
3. Compare findings with recent forecasting studies.
4. Clearly state study limitations.

The conclusions in this paper:

Enough

Suggestions for improvements that must be corrected by the author in conclusion:

Further Suggestions:
1. Emphasize that results depend on stock characteristics.
2. Mention limitations of the current forecasting setup.
3. Add future work related to multivariate forecasting and uncertainty estimation.

Have references been written with citation tools?

No

Suggestions for improvements that must be corrected by the author in references:

Further Suggestions:
1. Add more recent international journal references.
2. Include foundational forecasting references.
3. Check formatting and DOI consistency.
